

Changing Jason Windows Awning Winder Handle to New Version

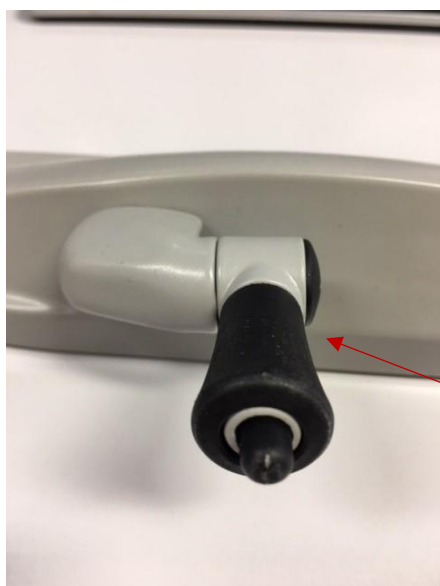

What you will need other than the Jason Windows Parts:

- 3mm allen key
- 2.5mm allen key
- Flat head screw driver

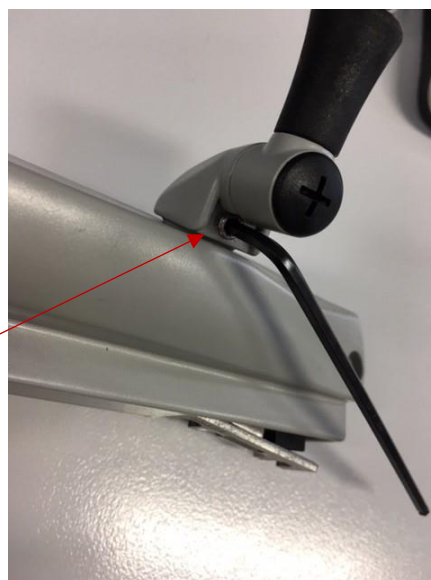

Step 1. Remove the awning winder unit (this will make it easier to change the handle) following the following instructional Jason Windows DIY Video

https://www.youtube.com/watch?time_continue=1&v=f_HobOaq6oo

Step 2. Loosen the grub screw on your existing winder arm with the 3mm Allen key

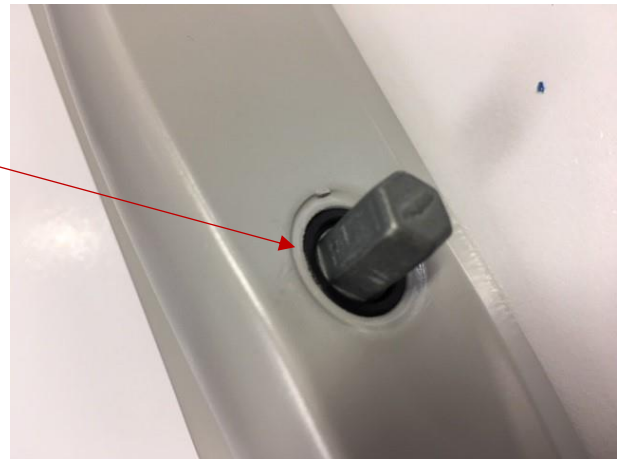

Grub screw sits under the handle

Step 3. Wedge a flat head screw driver under the base of awning winder handle and try to slightly lift the arm up creating a gap between awning winder unit base and the arm

Step 4. Pull the handle off and you should be left with the adaptor showing

Step 5. Loosen grub screw on the new winder arm with the smaller 2.5mm allen key

Step 6. Place the new winder arm onto the adaptor (adaptor shown in step 4) and then re-tighten the grub screw with the 2.5mm allen key
